

SAF Intra Range Suspension Product Update Notice

SAF-Holland has 'Custom Designed' the next generation of Intra Suspension's

Product: Intra Range Axles & Suspensions

Model: Intradisc Integral & Intradrum

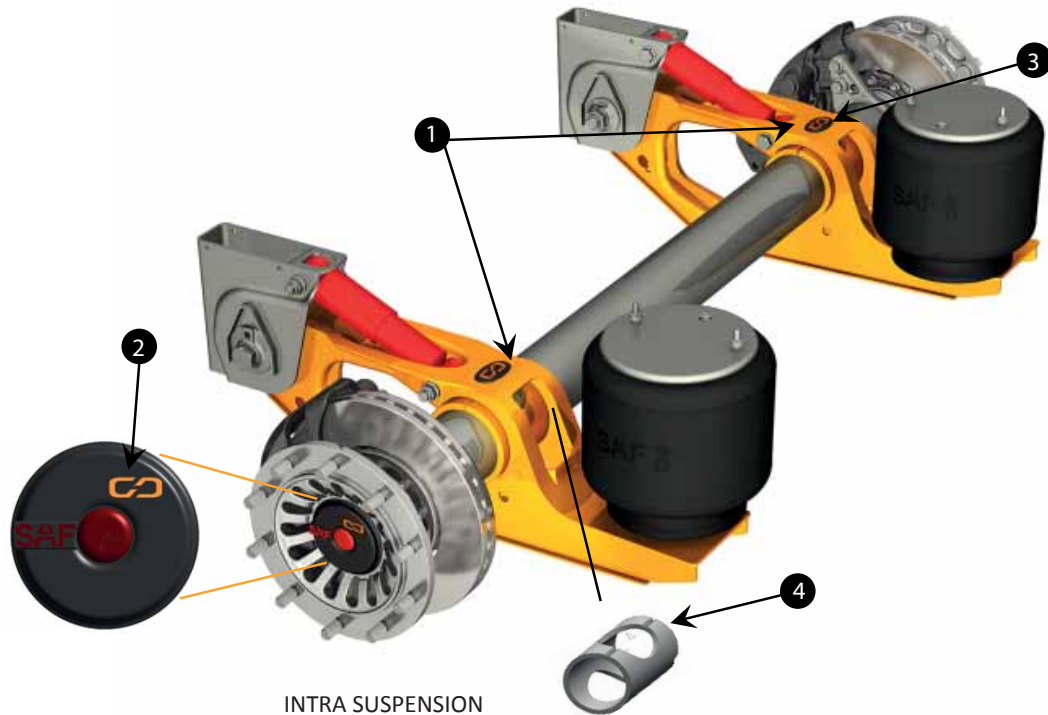

Due to the latest design change, SAF-HOLLAND is in a position to further decrease the overall weight of the Intra range suspension.

This is achieved by removing the reinforcement plate, improved material top plate and new axle bush orientation.

Engineered so it is stronger and lighter, SAF-Holland has marked the latest changes on it's most recent models.

This is effective from 01 March 2013.

The new 'CD' can be visually identified with the following changes:

1. Removal of reinforcement plate;
2. Custom Design cap design;
3. CD Clip
4. New orientation of the welds on the axle bush for less stress and improved durability

Additional Information

No changes to BOM or part numbers, fit or function of the Intra Suspension
