

Shock Absorber Design Variation

This service advice describes a recent change to shock absorbers (part number: 237 600 3100) that are fitted to SAF Modul suspensions, and supplied by SAF-HOLLAND as spare parts.

Two versions of the shock absorber are shown below. The version on the left is the previous part, which is identifiable by its steel outer casing. The version on the right is the new part, which is identifiable by its plastic outer casing. The plastic casing on the new part extends to cover the upper shock bolt eye.

Figure 1: Previous shock absorber Part #: 237 600 3100	Figure 2: New shock absorber Part #: 237 600 3100
	

Despite the differences in their appearance, the previous and new parts have the same performance characteristics, and are interchangeable. It is permissible to mix both versions of the shock absorber on a single axle, or on separate axles within a multi-axle group.

Throughout 2018, either version of the shock absorber may be supplied by SAF-HOLLAND.

Please contact SAF-HOLLAND on (03) 9971 7900 or service@safholland.com.au if you have any questions.
