

Change to supply of ELI replacement parts

In 2018, SAF-HOLLAND's ELI sensor system for fifth wheels was superseded by ELI-te, a more-advanced and robust fifth wheel sensor system. Refer to SAF-HOLLAND Technical Bulletin TB-1 (dated 18-4-2018), for more information on the introduction of ELI-te.

To support ELI sensor systems that remain in use in the field, SAF-HOLLAND has made a change to the electronic components that comprise the ELI system. Until now, the ELI 'logic box' (see below) was supplied as a replacement spare part (p/n: XB-10759-12). Henceforth, that logic box is discontinued, and will be replaced with a revised version, and a special patch cable that will allow it to be retro-fitted directly into existing ELI systems. Refer to graphics below.

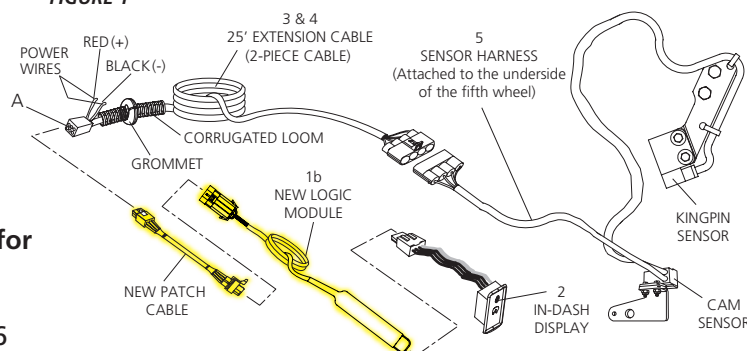

FIGURE 1

Superseded part:
ELI Logic box – XB-10759-12

FIGURE 1

New parts as replacements for superseded part:
Patch cable – PCH18-SAF-1
New logic module – EE12176

Please note that both the patch cable and the new logic module must be ordered separately.

Please contact service@safholland.com.au for further information.
