

Important Info – April 2023

SAF® Tire Pilot Plus™ (TPP)

New SMART Phone APP

Effective: March 1, 2023

Attention

With the launch of the new TPP electronic regulator assembly last November, SAF-HOLLAND now has available for the first time in its history, a Tire Pilot Plus application program available for Android and IOS operating systems. Through its Bluetooth® capabilities, any operator or technician will be able to electronically interface with the new TPP electronic controller which will provide real-time info when the vehicle is parked:

- Current System Tire Pressures
- Supply Pressure Estimation
- Historical Fault Information

While this application will provide valuable system information, especially for diagnostics, the user will not be able to reset any system parameters such as the pressure set point or other programming attributes.

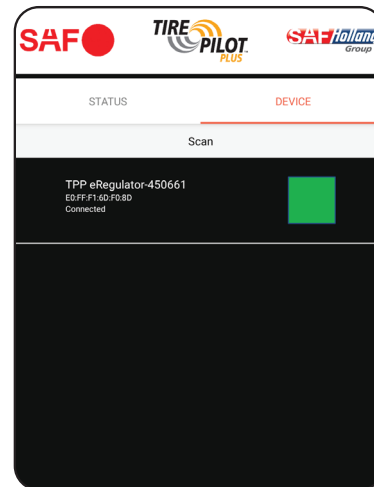

Please contact your SAF-HOLLAND sales representative or our corporate website for further information and our app tutorial.
