Measure to Reduce Plastic Packaging

As part of our ongoing efforts to reduce environmental impact and sustainably improve our CO_2 footprint, SAF-HOLLAND is implementing another environmentally friendly measure.

As of 1st January 2027, all **axles and axle spare parts** shipped from our **German production sites** will be delivered **without protective caps for wheel studs**.

Omitting the protective caps allows for a significant **reduction in plastic packaging**. This is another step toward **conserving resources** and **improving the environmental performance** of our products and processes.

Important Notice
This change affects **only the packaging and scope of delivery**.
Product quality, functionality, and safety remain unchanged and continue to comply with all applicable SAF-HOLLAND technical specifications and standards.
